The present invention relates to the field of fabrication of semiconductor devices, and more specifically to a method for forming doped polycrystalline silicon in a self-aligned fashion to an adjacent gate electrode. One of the problems in the field of semiconductor device fabrication is forming a polycrystalline silicon gate electrode in a self-aligned fashion to an adjacent polycrystalline silicon gate electrode. For example, FIG. 1 shows a cross section of a semiconductor wafer fragment 10 having a pair of polycrystalline silicon gate electrodes 12, 14 formed thereon. Semiconductor wafer fragment 10 includes a bulk substrate 16 having a gate oxide layer 18 formed thereon. Semiconductor wafer fragment 10 is annealed to activate the gate oxide layer 18. Gate oxide layer 18 forms the gate dielectric for a subsequent gate conductor formed thereover. After activation, gate oxide layer 18 is implanted with an n-type dopant material to form a n+ gate conductor 20 for the first gate electrode 12. Subsequently, a polycrystalline silicon layer 22 is deposited over the wafer fragment 10. A patterned photoresist layer (not shown) is formed over polycrystalline silicon layer 22, and is used to define the location of gate electrode 14. Gate electrode 14 is formed by anisotropic etching of polycrystalline silicon layer 22, with the photoresist pattern used to indicate the edge of the etch. This etching leaves a portion of polycrystalline silicon layer 22 in the shape of gate electrode 14. A thicker portion of polycrystalline silicon layer 22 remains over the gate oxide layer 18, and is used as the second polycrystalline silicon gate electrode 14. A thin portion of polycrystalline silicon layer 22 over the gate oxide layer 18 is removed to form the source/drain regions of the transistor. Unfortunately, the anisotropic etching of polycrystalline silicon layer 22 results in a substantial over etch of the gate oxide layer 18. This

3D ObjectARX 3D, an extension to AutoCAD ObjectARX, is a free software C++ library for 3D modeling and rendering. It offers point-based 3D, volumes, solids, meshed surfaces, grids, loft and area models, animations, special effects, and hypermedia interfaces. Autodesk Revit is a platform built around 3D modeling. The basic model is a series of objects such as a house, bridge, or office building that can be annotated with parametric and non-parametric data. The platform is designed to produce files that can be viewed and edited on the web and through mobile devices. 3D printing Autodesk announced a partnership with 3D Systems in March 2013, to bring 3D printing to Autodesk 3D design software. Autodesk 3D Design software and Autodesk Inventor software can print with 3D Systems' "3D Systems Stereolithography" machines. VectorWorks VectorWorks is Autodesk's vector graphics software (later, a complete vector design suite; VectorWorks 2013 was the last version to include only vector graphics capabilities), which includes vector editing, a library of graphical symbols and images, interoperability tools, and a professional grade modelling and rendering module. The software is capable of constructing models in the CAD format of most other major CAD packages, as well as producing BIM and VRML. VectorWorks has strong interoperability with other Autodesk products, most notably AutoCAD, Adobe Illustrator, and Inventor. VectorWorks may also be used to display or edit many other file types, such as DXF and DWG, as well as such non-CAD file formats as STL and STEP. VectorWorks is mostly based on the original Macintosh version of Intergraph's GDS/2 data interchange format. Autodesk Maya Maya is a platform for 3D modelling and animation. Maya is a complete suite of applications and a powerful platform for building complete 3D content. It has a variety of applications for architecture, animation, illustration, game development, and film. Maya is capable of working with all the major software packages used in animation, such as Softimage, 3ds Max, and Houdini. Maya can import 3D Max, and vice versa. The software supports file formats such as Cinema 4D, XSI, and AVI. a1d647c40b

3. Install the patch Step1: Execute the patch.nmm file 1. From the Patch 2018.n-mmr9 zip file, extract the file (called "patch.nmm") to your download folder. 2. Open the patch.nmm file and edit the paths to match the paths to the latest release's files: \* "patch.nmm" -> "C:\Program Files (x86)\Autodesk\Inventor 2018\Inventor.exe" 3. Apply the patch by executing the patch.nmm file. 4. Press Shift-R, then A, then the Enter key to restart the application and apply the patch.
