Photoshop Elements is very easy to use and only requires you to be able to read the instructions. The interface is user-friendly and straightforward. You can create, edit and save almost any type of file. Here's our guide to Adobe Photoshop Elements. It will teach you everything you need to know in terms of creating, editing and manipulating images. We also have a useful guide to Photoshop icons. Create a new image from scratch In order to create a new image, you need to first create a new blank image. You do this by going to File > New and then selecting either the "Photoshop or Camera RAW" or "Create new image".

When creating a new image, you have to decide what kind of file you want to create. For example, you can create: • a new document • a new image, preserving the current image dimensions • a new image, preserving the existing image dimensions • a new image, resizing the existing image to new dimensions • a new image, resizing the existing image and then rotating it 90 or 270 degrees • a new image, resizing the existing image and then flipping it horizontally or vertically. "Creating a new document is a quick way of creating a new file in the exact same way as Photoshop or Elements," says Jeremy Kay, product manager at Adobe. "The advantage of this is that you can save this new image in a different file format, such as PDF or HTML. This is useful if you want to use the image elsewhere on your computer, such as in a presentation or web page. In the same way, you can also use this method to create a file from which you can create extra high-quality or distortion-free copies."

Lighten and darken Adobe Photoshop Elements supports two image editing functions: lightening and darkening. Lightening and darkening are easy to use. Simply select a portion of the image you wish to lighten or darken. By clicking and dragging in the box or marquee, you can select an area. The area you lighten or darken will expand automatically when you press and hold the left mouse button. You can then drag to resize the area. If you select an area that's already lightened or darkened, Photoshop Elements will shrink it to the new size. You can check the darkening effect by selecting the Image > Adjustments > Lighten or Darken. a681f4349e

| **Crop** Use the Crop tool to accurately select the portion of an image that you want to keep. The tool is located in the top toolbar in the Edit menu. --- | **Dodge** Use the Dodge tool to lighten shadows and darken highlights. It's located at the top of the tools palette, under the last tool listed. | **Gradient** The Gradient tool allows you to create soft colors with blends of three colors. The color boxes are placed on the image at the same place relative to the image's center of mass. You can create a gradient horizontally, vertically, or diagonally. Click the squares on the Color box tool option bar in order to vary the color placement. Click the small gradients icons at the bottom of the Color box tool option bar to add more gradient colors. For vertical and horizontal gradients, you can vary the opacity of each color. Gradients can be applied over a solid color, or over any image. There are two additional tools available for creating gradients. The Gradient Map tool, as it is called, allows you to create a gradient by mapping image pixels of one color to a gradient layer. A key tool for photo retouching, it is located under the last tool listed, the Gradient tool. The Gradient Dialog Box, located under the last option in the Gradient tool, has many of the same options as the Gradient Map tool. --- | **Gradient Map** As the name suggests, this tool is for creating a gradient from one color to another based on pixels that are already mapped to another layer. The dialog box is much simpler than the Gradient Tool, so it's easier to use this tool. --- | **Blur** The Blur tool is for applying a radial blur to images. It's located under the last tool listed. You select a radius and a blur falloff. --- | **Paint** The Paint tool allows you to apply an image over an existing image or paint a selection outline. It's located under the last tool listed. You paint the area of an image that you want to replace. Because the tool is so easy, you can quickly apply a color to an entire image to change the tones. | **Pencil** Sometimes you can't or

Q: how to combine column value into a single string i have a table like this : ColorId | ProdId | NullColorId 0 | 0 | null 1 | 0 | 1 2 | 0 | null 3 | 0 | null 4 | 1 | null 5 | 1 | null 6 | 1 | null I have a query that retrieves a count of the 'NullColorId' : select count(case when NullColorId is not null then 1 else 0 end) as nullcolorcnt from tbl I would like to get a list with 'ColorId' and 'ColorName' like this : ColorId | ColorName 0 | red 0 | yellow 0 | null 1 | green 1 | null 2 | null 3 | null 4 | blue 5 | null 6 | null A: You have to use joins and unnest() function and group by ColorId to get the ColorName and ColorId for every values from NullColorId column. SELECT ColorId, ColorName FROM (SELECT ColorId, ColorName, NullColorId, NullColorId AS ColorId, COUNT(*) cnt FROM tbl GROUP BY ColorId) nested UNNEST(cnt) cnt WHERE NullColorId IS NOT NULL If you are using SQL Server, you could use window functions: SELECT ColorId, ColorName FROM (SELECT ColorId, ColorName, NullColorId, NullColorId AS ColorId, COUNT(*) cnt, COUNT(1)
