A new monosaccharide linkage in glycosaminoglycans: methyl beta-D-galactopyranoside. The monosaccharide methyl beta-D-galactopyranoside (MeGal) has been used as a radioactive probe for

---

studying glycosaminoglycan (GAG) synthesis. [3H]MeGal has been incorporated into GAGs at a low level from [3H]galactose at various sites of the chain of acetylated chondroitin sulfate. The site of labeling has been established by digestion of GAGs with chondroitinase-A and chondroitinase-C, followed by partial separation of the fragments by sodium dodecyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE). The results suggest that MeGal is incorporated via a transglycosylation mechanism and that more than one MeGal residue is incorporated per sugar chain. The background description provided herein is for the purpose of generally presenting the context of the disclosure. ### What's New in the?

Bass Test Software has been specially designed to test the bass sound rendering capabilities of the device. The sound renders continuous bass notes for the duration of the test. Once you press the Start button, the bass test proceeds, and it stops by default when it ends or when you press Stop. You can control this in two ways. There are 7 bass tracks you can select, with different Beats and Frequencies. If the device is properly set up, you can select the Bass track, press Start and allow the bass to play. If the device is not set up properly, you will have the option of pressing the Start button and setting the Bass track as well as the volume. Bass Test Software is specially designed to test the bass sound rendering capabilities of the device. The sounds render continuous bass notes for the duration of the test.
